

Personal Data Processing Annex

Annex to the **Walkstamp** subscription agreement · Law 13.709/2018 (LGPD) · version of 2026-08-19

Courtesy translation. This Annex is executed under **Brazilian law** — Law 13.709/2018 (LGPD) — and the **Portuguese version governs**: it is the one that is signed, and it prevails in case of any divergence. This translation exists so that a security or legal review can read the document without waiting for one. If your organisation requires an annex drafted under the GDPR instead, ask us before signing — the applicable law is a decision, not a translation.

This Annex forms part of the subscription agreement entered into between **Produtize Produtos e Serviços Inteligentes Ltda.**, company register (CNPJ) 48.417.292/0001-99 (the “**Processor**”), and the subscribing customer identified in the signature block (the “**Controller**”), and governs the processing of personal data arising from the use of Walkstamp.

The point that changes the scope of this Annex. Walkstamp is a tool that runs **entirely in the user's browser**. Video, audio, screen images and transcripts are **never transmitted to the Processor** — there is no processing server. The processing governed here reaches only the data of the **paid account**, listed in section 2. Vendor-review questions about retention, encryption or destruction of the audiovisual content do not apply because that content never reaches the Processor, and the Controller can verify this itself with the browser's network inspector open on the Network tab.

1. Roles

1. The **Controller** decides the purposes and the means of processing the data described in section 2 and is responsible for the lawfulness of the collection and for the applicable legal basis.
2. The **Processor** processes that data **exclusively** in accordance with the Controller's documented instructions — the subscription agreement, this Annex and the ordinary use of the product's functions being the initial documented instructions.
3. The Processor does **not** use that data for its own purposes, does **not** combine it with other databases, does **not** transfer or sell it, and does **not** use it to train artificial intelligence models, whether its own or a third party's.
4. For commercial contact data, billing, anonymous usage measurement and website access logs, the Processor acts as a **controller** in its own name, as set out in its Privacy Policy. That data falls outside the scope of this Annex.

2. Subject matter of the processing

Categories of data	Categories of data subjects	Nature and purpose	Duration
List of cases to execute (the script), test cases, support tickets, document templates, account configuration, team seats, receipts, and .json session attachments where the user chooses to attach them — which may contain screen images of the Controller's environment	Employees, contractors and users of the Controller holding a seat on the account; and any data subjects whose data appears on the screens captured by the Controller	Storage, organisation and provision, by automated means, for the sole purpose of providing the contracted service	For the term of the subscription, and up to 90 days after it ends

The Processor does **not determine** what appears on the captured screens. It is for the Controller not to capture unnecessary personal data and to use the redaction and cropping functions available in the tool before attaching a session.

3. Obligations of the Processor

1. **Confidentiality.** Restrict access to personnel who need it, under a confidentiality obligation that survives the end of their engagement.
2. **Security.** Maintain the technical and administrative measures in section 5, suitable to protect the data from unauthorised access and from accidental or unlawful situations (LGPD art. 46).
3. **Assistance to the Controller.** Assist it, to a reasonable extent, in responding to data subject requests (arts. 18 and 19), in carrying out impact assessments (art. 38) and in complying with determinations of the ANPD.
4. **Data subject requests received directly.** Forward them to the Controller within **5 business days**, without answering them on its own initiative.
5. **Records.** Keep records of the processing operations carried out on behalf of the Controller (art. 37) and make them available upon request.
6. **Return and deletion.** On termination, delete the data within the period in section 2, save for a legal retention obligation. Export in **.json** and **.csv** is available to the Controller at any time, inside the product, without depending on a request.

4. Sub-processors

The Controller grants general authorisation to the sub-processors below. The list is the same one published in the Privacy Policy, and the published version prevails:

Sub-processor	Role	Data it receives	Country	Safeguard
Supabase	Database and attachment storage	All paid-account content. Never video, audio or transcripts	Brazil (São Paulo)	Vendor data-processing agreement
Vercel	Application hosting	Technical access logs	Global network	Standard contractual clauses (art. 33, II)
Stripe	Subscription billing	Name, e-mail and payment details of the subscriber	United States and European Union	Standard contractual clauses; PCI-DSS
Brevo	Sending the sign-in link and the e-mail invitation	Recipient e-mail address and message text	European Union (France)	Standard contractual clauses

Change of sub-processor. The Processor will notify the Controller by e-mail, **30 days in advance**, of the replacement or addition of any sub-processor that processes the data in section 2. Within that period the Controller may object on reasoned grounds; where the objection cannot be accommodated, the Controller may terminate the subscription without penalty, with the right to export the data beforehand.

5. Technical and administrative measures

1. **In transit:** TLS across all application traffic and server calls.
2. **At rest:** database and attachment storage encrypted at rest by the infrastructure provider, in the São Paulo region. The encryption is the provider's; the choice of region is the Processor's.
3. **Authentication:** access by a single-use link sent by e-mail, with limited validity and invalidation after first use. No password is stored.
4. **Database access control:** the tables live in their own schema, unreachable from the browser. Execute permission on the exposed functions is revoked from the public roles and granted only to the service role, which exists solely on the server.
5. **Attachments:** stored in a private repository, with no public read. Delivery is made by the server after an authorisation check, through a signed address valid for **two minutes**.
6. **Credential segregation:** service keys kept only in server environment variables, never embedded in the code delivered to the browser.
7. **Web server access logs** kept for 6 months (art. 15 of the Brazilian Civil Rights Framework for the Internet) and then discarded.
8. **Minimisation by architecture:** the audiovisual content is never transmitted to the Processor — the strongest security measure in this Annex is the absence of the data.

The Processor does **not** hold SOC 2 or ISO 27001 certification and does not claim to.

6. Security incidents

1. On becoming aware of an incident that may give rise to relevant risk or harm, the Processor will notify the Controller within **48 hours**, at the account's contact e-mail.

2. The notification will state: the data affected, the data subjects involved or their order of magnitude, the technical measures already taken, the risks and the recommendations — and will be updated as the investigation advances, rather than waiting to be complete.
3. The Processor will cooperate with the Controller and with the ANPD in the investigation, the mitigation and the communications required by art. 48 of the LGPD.

7. Requests from public authorities

The Processor will only comply with requests from public authorities supported by a valid legal basis, delivering only what is expressly requested, and will **notify the Controller** so that it may exercise its defence, save where expressly prohibited by law. The Processor holds no video, audio or transcript of the Controller and therefore has no way of delivering them to any authority.

8. Audit

The Processor will provide the Controller, upon written request and at most once a year, with the information needed to demonstrate compliance with this Annex, including the completed security questionnaire and the description of the measures in section 5. On-site audit at third-party facilities (infrastructure providers) will follow what those vendors' contracts allow.

9. International transfers

The data in section 2 is stored **in Brazil**. International transfers occur, restricted to the sub-processors in section 4 whose operation is global or foreign, supported by standard contractual clauses (LGPD art. 33, II).

10. Term and precedence

This Annex remains in force for the term of the subscription and, as to the deletion and confidentiality obligations, until they are fully performed. In case of conflict between this Annex and the subscription agreement as to the processing of personal data, **this Annex prevails**.
